

Ultrafine Aluminum Oxide Blast Media

Aluminum oxide is white, spherical blasting media. This product is primarily used for surface finishing, capable of polishing workpieces to achieve a matte surface brightness.

- High-purity white alumina does not produce impurities or contamination.
- Smaller sizes with a minimum length of 5 microns can protect the surface from wear.
- Fragile and quick to decompose, with a more obvious blasting effect.
- Corrosion-resistant and easy to dissipate heat.
- Higher hardness and toughness, economical and environmentally friendly.
- Certified with ISO9001:2008 and ISO14001 standards.

CHEMICAL ANALYSIS

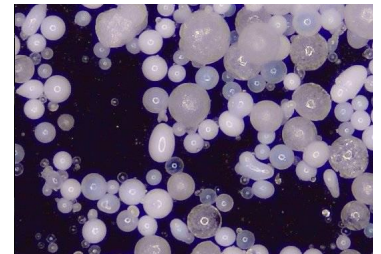

Typical values	Al ₂ O ₃	Others
%	>99	<1

PHYSICAL PROPERTIES

	Numerical Value
Mohs Hardness	7
Grain Shape	Sphere
Particle Color	White
Density	3.8g/cm ³
Bulk Density	2.2g/cm ³

MAIN APPLICATIONS

- Cleaning of electronic components
- Enhancing metal texture
- Glass etching or frosting
- Monument lettering
- Matte finishing
